

# HOME VIDEO INTERCOMS

## PRODUCT OVERVIEW

*Know who's at the door or gate*

HOME VIDEO INTERCOMS WITH MOBILE APP CAPABILITY

## MICRON RESIDENTIAL INTERCOMS

Screen visitors and control doors and gates.

Know who is on the other side before you open the door.

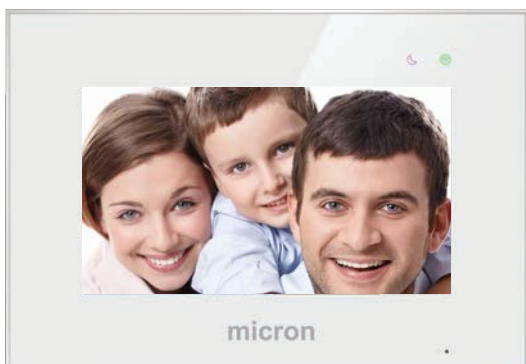

### Screen & Record Who is at the Door

Micron intercoms allow you to easily and safely screen who wants to get access to your home. For added peace of mind, the door station can also be set up to either take a picture or record a short video of who is at the door.

### Touch Button or Touch Screen Options

Whether you prefer the functionality of incorporated buttons, or the smooth look of the touch screen, we have either as an option for your monitor choice.

### Multiple Screens

There is no need to run to the front of the house every time the door rings. Up to 4 monitors can be connected together, so no matter how small or how large your home is, there is a suitable number of monitors that can be installed. For smaller single-storey houses common locations include entry hallway and kitchen/living area, while for larger houses an additional third unit is most often installed upstairs.

# SCREEN AND OPEN REMOTELY

Ideal when you can't get to the door quickly.

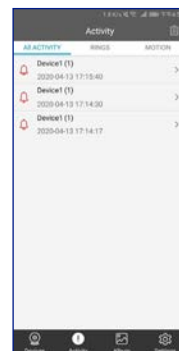

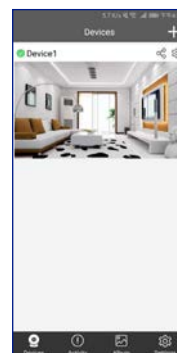

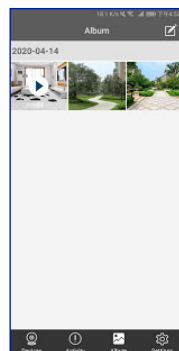

Answer your front door, talk to your visitors or even unlock your gate or door to let your visitors in from anywhere via your smart phone.

## Ethernet/Wi-Fi Versions

Working in the garden when the door rings? At the corner shops when your in-laws arrive? At work when a delivery can be left behind the gate? Has a loved one forgotten their keys? The solution is a Wi-Fi and Ethernet enabled Intercom. Both of the Micron Touch Button and Touch Screen Intercoms are available in Wi-Fi/Ethernet versions.

With the free Micron Intercom App, your family will be able to answer the doorbell from anywhere. Remote opening of gates and doors is possible with the installation and connection to electronic door strikes and gate motors.

# TOUCH BUTTON INTERCOM KITS

For those who prefer buttons

## Two touch button models

For those that prefer physical buttons, the Touch Button variant is the entry level model, also available in a Wi-Fi version that allows answering and control using a linked mobile device. Wi-Fi models can be connected to the internet (your home internet network) using the supplied Ethernet connector or wirelessly using the built-in wi-fi communicator.

**IM4KTB TOUCH BUTTON KIT**  
1 x IM4TB Intercom Monitor + Power Supply  
1 x IM4D Door Station

**IM4KTBW TOUCH BUTTON WI-FI KIT**  
1 x IM4TBW Wi-Fi Intercom Monitor + Power Supply + Ethernet Connector  
1 x IM4D Door Station

# TOUCH SCREEN INTERCOM KITS

Sleek and available in black

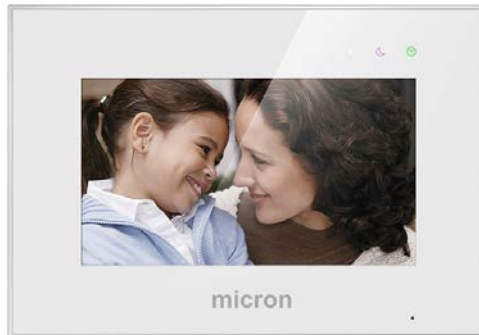

## Four touchscreen models

For those that prefer the smooth look of a touchscreen, four models are available. They come in white or black and are available in wi-fi and non wi-fi versions. Please note that mobile phones shown below are for illustration purposes only and are not supplied.

### IM4KTSB TOUCH SCREEN KIT

1 X IM4TSB Intercom Monitor + Power Supply  
1 x IM4D Door Station

### IM4KTSBW TOUCH SCREEN WI-FI KIT

1 X IM4TSBW Wi-Fi Intercom Monitor + Power Supply + Ethernet Connector  
1 x IM4D Door Station

# KEY FEATURES & BENEFITS

Designed with you and your home in mind

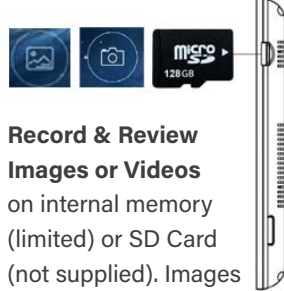

## Why they're more than just a door bell

Residential intercoms have become more than simple door bells. They allow paging from one area of the house to another, enable opening of doors or gates with a click of a button or an icon, provide images or videos of who was at the door and much more. Take a look below at the useful features and benefits a modern intercom can offer.

**Up to 2 Door Stations and 4 Monitors** per system cover a wide range of house sizes.

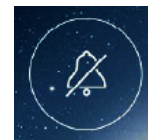

**Record & Review Images or Videos** on internal memory (limited) or SD Card (not supplied). Images & videos can be set to record automatically when the door rings.

**Built-In Wi-Fi** (wi-fi models only) allows two-way communication with mobile devices. Answer the door from anywhere.

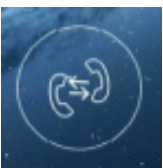

**Open Electric Gates & Doors Fitted with Electric Strikes** from any monitor or connected mobile device. Additional wiring, electric locks and power supplies will be required.

**"Do Not Interrupt" or Silent Mode** can be **Scheduled** to fit with your daily routine.

This feature is great for anyone working from home. Ringing of the door bell and linked mobile phones can be embarrassing during conference calls for example. A **Recorded Message** can be used to answer the door bell when you are unavailable.

Use the **Intercom Function** to page and communicate between any monitors. This is ideal for larger homes when calling the upstairs level for example from the kitchen/living area.

It can also be a life saver if the property has a studio/granny flat where a family member resides.

**Customise Intercom Settings.** Select from over a dozen languages, choose from a wide range of ring tones, select brightness and screen saver modes. A range of customisable settings is available via the Settings Icon.

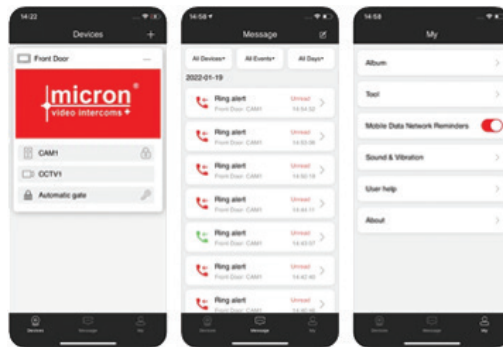

# MICRON INTERCOMS+ APP

Freedom to answer from anywhere

## Expecting a delivery? Relaxing in the yard? Out of home?

With a Micron Video Intercom with Wi-Fi capabilities we have you covered. Your paired mobile device running the Micron Video Intercom+ App will call you within seconds if the intercom is not answered at home.

The free Micron Video Intercoms+ App for Android or iOS allows you to answer the door and unlock doors and/or gates from anywhere on your mobile device.

**Quick and easy wireless connection to Android and iOS mobile devices.**

### DOWNLOAD THE Wi-Fi INTERCOM CONNECTION INSTRUCTIONS

Step-by-step cheat sheet to pair your mobile devices with a Micron Wi-Fi enabled video intercom.

**Free Micron Intercoms+ App**

# ELECTRIC STRIKES

Ideal for gates, doors and intercoms.

## About electric strikes

Electric door strikes replace the usual metal plate that holds a lock's bolt with an electric latch, for extra access control. Electric Strikes stocked by Micron are manufactured to high quality and are specifically designed for the Australian market. Gates and doors fitted with electric strikes that are connected to intercoms can be opened with the push of a button/icon on intercom monitors, or using the mobile app for wi-fi models.

### Models Stocked at Micron

The ACL15 Weather Resistant (IP56 rated) Surface Strike is ideal for pedestrian gate applications or any other light commercial/residential application where a rim (surface) mounted strike is required.

The ACL10 Strikes are designed to be morticed into a door frame on a single swing door equipped with either a mortice lock or a cylindrical tongue lock. The strikes are pre-drilled to accommodate for extension lips, have a holding strength of up to 1200 kg and is weather resistant (IP56 rated).

The ACL20 and ACL20M (Monitored) Strikes are manufactured from stainless steel, accept DC Voltages from 10 to 30 V and are site interchangeable from Fail-Secure to Fail Safe (Power to Release to Power to Lock) by only using a small screw-driver. The ACL20 Series Strikes have a 10 mm strike lip as standard. All ACL20 Series Strikes are pre-drilled to take extension lips in various sizes.

**ACL15**

**ACL10**

**ACL20 & ACL20M**

## Power Supplies for Electric Strikes

### 1 & 5 Amp Power Packs Available

Electric strikes require power to operate. This may be drawn from an intrusion/access system (1 or two strikes maximum) or stand-alone power packs if more strikes are required. 1 Amp and 5 Amp power packs are available for use with Electric Strikes and Magnetic Locks.
